Human Genomic DNA

Shipping: On Dry/Blue Ice  
Batch No.: See vial  
Concentration: 200ng/μl

Catalog numbers
- BIO-35025 :  500μl at 200ng/μl

Storage and stability:
The Human Genomic DNA is shipped on dry blue ice. On arrival store at -20°C for optimum stability.

Expiry:
When stored under the recommended conditions and handled correctly, quality is retained until the expiry date on the outer box label.

Safety precautions:
Please refer to the material safety data sheet for further information.

Quality control specifications:
Bioline operates under ISO 9001 Management System. Human Genomic DNA is extensively tested for quality prior to release.

Notes:
Research use only.

Store at -20°C

Description
The highly purified Human Genomic DNA is isolated from a pool of placental material. The average length of the DNA is greater than 50Kb and is suitable for Southern blotting, genomic library construction and as a control template. The Human Genomic DNA is supplied at a concentration of 200ng/μl.

Features
- Highly purified
- Fragments of up to 50Kb

Applications
- For high throughput applications
- Suitable for a wide range of PCR assays
- Southern Blotting
- Genomic library construction
- Products suitable for blunt ended cloning
- Control template
